

GARTNER HYPE CYCLE FOR GENERATIVE AI, 2024

**Gartner Predicts 40% of
Generative AI Solutions Will
Be Multimodal By 2027**

The Future of Generative AI

Figure 1: Hype Cycle for Generative AI, 2024

Generative AI (GenAI) is evolving rapidly, and by 2027, 40% of solutions will be multimodal, up from just 1% today.

This shift promises enhanced human-AI interaction and industry-wide transformation.

Top AI Trends

**Multimodal
GenAI**

**Open-Source
LLMs**

**Domain-Specific
GenAI Models**

**Autonomous
Agents**

Multimodal GenAI

Transforming AI Interaction

By combining text, image, audio, and video, multimodal GenAI enables richer interactions and better data comprehension.

Currently, limited to a few modalities, these models will evolve, offering seamless, high-quality experiences across all human-AI touchpoints.

Open-Source LLMs

Driving Innovation and Control

Open-source LLMs provide enterprises with customisable, transparent, and cost-effective AI models.

By democratising AI, they foster innovation, improve security and privacy, and help reduce vendor lock-in, making them ideal for specific business applications.

Domain-Specific GenAI Models

Tailored to Industry Needs

Domain-specific models offer optimised solutions for industry-specific tasks, improving accuracy, security, and contextual understanding.

These models reduce the need for advanced prompt engineering and accelerate time to value.

Autonomous Agents

Redefining AI Capabilities

Autonomous agents can operate independently to complete tasks without human intervention.

By learning and adapting, they enhance business operations and customer experiences, providing cost savings and a competitive edge.

Navigating the Future of GenAI

As enterprises embrace multimodal AI, open-source LLMs, and domain-specific models, they will gain a competitive advantage and accelerate time to market.

Despite the challenges, the opportunities for transformational AI applications are immense.
